

## ABSTRACT

CABLE, IN PARTICULAR FOR ELECTRIC ENERGY TRANSPORTATION OR DISTRIBUTION, AND AN INSULATING COMPOSITION USED THEREIN

5

The invention describes a cable, in particular for electric energy transportation or distribution, in which an electrically insulating layer is present, consisting of a material substantially free of lead or derivatives thereof, and having high resistance to water. This material includes an elastomer terpolymer having the following composition:

10

a) 50-90 moles percent of ethylene;

b) 10-50 moles percent of an  $\alpha$ -olefin;

c) 0.16-5 moles percent of 5-vinyl-2-norbornene;

the sum of the moles percent of a), b), c) being 100, said terpolymer having a branching index of less than or equal to 0.5 and a molecular weight distribution index  $M_w/M_n$  of greater than or equal to 6.
